Sprint 4 Report

Team Justin² : NBAStat v0.5.1

Sprint #4

Review Date: 12/02/19

Actions to stop doing:

Now that we have the fundamental examples of each component present in our project we should now move on to refining existing components. We need to stop adding new features and focus on cleaning up what's already there.

Actions to start doing:

With our entire foundational body in place we need to start refining the existing components and adding on data that is not properly represented yet. Formatting needs to be adjusted to better display elements on the page more desirably. Colors need to be adjusted to contrast with one another better and dynamically at the most.

Actions to keep doing:

We need to keep refining the existing template to accommodate more data as well as improve the design of the document to accommodate it nicely.

Work completed/not completed:

We've reached our minimum viable product as of this Sprint. In terms of what's done and not done, we have all the basic information we wanted displayed on the webpages. We do not have the team HTML page setup but that was not part of our definition of done.

Work completion rate:

Our work completion rate was fantastic for this Sprint considering the fact that we had fallen very far behind in the previous Sprint due to unforeseen issues with our endpoint queries. We managed to get our product ahead of schedule on desired features despite those setbacks.
